NATURAL RESOURCES  
FOR ENERGY

# CONSIDERATIONS FOR USING NATURAL RESOURCES FOR ENERGY IN ALBERTA

*(CHART)*

**ENERGY  
EDUCATION**  
TOOL KIT

BY INSIDE EDUCATION

NATURAL RESOURCE	OPPORTUNITIES	CHALLENGES
 <p><b>Natural Gas</b></p>	<ul style="list-style-type: none"> <li>• We have lots in Alberta</li> <li>• Sell to other countries to grow our economy</li> <li>• Natural gas power plants respond easily to changes in energy demand</li> </ul>	<ul style="list-style-type: none"> <li>• Non-renewable</li> <li>• Greenhouse gas emissions</li> <li>• Pipelines and wells have an impact on land, air, water, plants and animals</li> </ul>
 <p><b>Oil</b></p>	<ul style="list-style-type: none"> <li>• We have lots in the Alberta</li> <li>• Source of electricity in remote communities</li> <li>• Sell to other countries to grow our economy</li> </ul>	<ul style="list-style-type: none"> <li>• Non-renewable</li> <li>• Greenhouse gas emissions</li> <li>• Seismic lines, wells, pipelines, rail lines have an impact on land, air, water, plants and animals</li> <li>• Water is used during extraction, production and refining</li> </ul>
 <p><b>Coal</b></p>	<ul style="list-style-type: none"> <li>• We have lots in Alberta</li> <li>• Lower costs compared to other resources because mines, power plants and transmission lines already exist</li> </ul>	<ul style="list-style-type: none"> <li>• Non-renewable</li> <li>• Greenhouse gas emissions</li> <li>• Mines have an impact on land, air, water, plants and animals</li> <li>• Coal-fired power plants respond slowly to changes in electricity demand</li> </ul>
 <p><b>Uranium</b></p>	<ul style="list-style-type: none"> <li>• A small amount of uranium makes a lot of energy (efficient)</li> <li>• No greenhouse gases are emitted</li> </ul>	<ul style="list-style-type: none"> <li>• Non-renewable</li> <li>• Radioactive waste is produced</li> <li>• High cost to build a power plant</li> <li>• Uranium is mined in remote locations and transported long distances to power plants</li> </ul>
 <p><b>Geothermal</b></p>	<ul style="list-style-type: none"> <li>• Renewable</li> <li>• No greenhouse gases are emitted</li> <li>• Reliable source of energy (<i>supply doesn't change</i>)</li> </ul>	<ul style="list-style-type: none"> <li>• High cost to build wells and power plants</li> <li>• Not available everywhere (<i>parts of Alberta have low underground temperatures</i>)</li> </ul>
 <p><b>Water / Hydro</b></p>	<ul style="list-style-type: none"> <li>• Renewable</li> <li>• No greenhouse gases are emitted</li> <li>• Reservoir can be used for recreation</li> <li>• Responds quickly to changes in electricity demand</li> </ul>	<ul style="list-style-type: none"> <li>• High up front cost to build dams and reservoirs</li> <li>• Changes the river/stream flow and aquatic habitat</li> <li>• Reservoirs flood surrounding land impacting local communities, including First Nations</li> </ul>
 <p><b>Solar</b></p>	<ul style="list-style-type: none"> <li>• Renewable</li> <li>• No greenhouse gases are emitted</li> <li>• Photovoltaic (<i>solar</i>) panels require little maintenance once built</li> <li>• Solar panels can be built where you need them (<i>i.e. on the roof of a home</i>)</li> </ul>	<ul style="list-style-type: none"> <li>• High cost to build solar panels</li> <li>• Supply varies throughout the day and is not available at night</li> <li>• Energy storage technology is lacking for large projects</li> </ul>
 <p><b>Bio-mass</b></p>	<ul style="list-style-type: none"> <li>• Renewable</li> <li>• Makes use of waste material that would otherwise contribute to landfills (<i>wood chips, cow manure, food waste, etc.</i>)</li> </ul>	<ul style="list-style-type: none"> <li>• Greenhouse gases produced</li> <li>• Limited supply of waste material in some cases.</li> <li>• If grown for just energy this impacts land for food production</li> </ul>
 <p><b>Wind</b></p>	<ul style="list-style-type: none"> <li>• Renewable</li> <li>• No greenhouse gases are emitted</li> <li>• Small physical footprint on the landscape</li> </ul>	<ul style="list-style-type: none"> <li>• Supply varies and wind speeds can be too high or too low</li> <li>• Wind turbines obstruct views</li> <li>• Birds and bats flight paths affected</li> </ul>
